

The required separation distances from MedicaMarijuana Provisioning Centers and Marijuana Retailers to the various buffered uses listed in Ordinance No. 1257, Section 1300.10 are measured at right angles from the nearest edge of the property containing the provisioning center/retailer to the centerline of the road, along the centerline of the road and connecting at a right angle to the nearest point of the property containing the buffered use. NOTE: These buffering measurements are used only for distances under 1300.10 of the ordinance. The Clerk's Office uses radius measurement to determine density of certain marijuana operations and potential impact on nearby neighborhoods per 1300.04(b)(12).
